

TOKYO METROPOLITAN UNIVERSITY

Faculty of Urban Environmental Sciences

T-GLIPS

TMU Global Leaders for Innovation Programs
To Be Introduced in April 2027

Introducing programs for systematically learning the cutting-edge expertise

cultivated in four existing departments in English!

** Successive expansion into other faculties and departments is planned.*

Features of the Four Departments

Department of Geography

Students in this department conduct wide-ranging investigation, analysis, and research on the global environment to consider the human-environment interrelation. Five laboratories have been established, and emphasis is placed on fieldwork. The department is unique in Japan for allowing students to learn various types of geography, including using geographic information systems.

Department of Civil and Environmental Engineering

Students in this department study the three fields of social infrastructure, safety and disaster prevention, and environmental systems that lay the foundation for economic development. Due to global warming and worsening natural disasters, the need for infrastructure improvement that can adapt to those issues is rising worldwide. Students acquire advanced expertise and develop into international, highly skilled human resources who can succeed at international organizations and global companies.

Department of Applied Chemistry for Environment

Students in this department will find education and research opportunities to study applied chemistry that can be used in the field of chemistry, based on diverse chemical fields. Through SDGs-related education and research, the department fosters researchers and chemists who can create molecules and materials for a wide variety of fields including the environment, energy, and biotechnology.

Department of Tourism Science

The goal of this department is to elucidate tourism from the viewpoint of science based on scientific fields such as engineering and physical science. The department strives to promote the conservation of the local environment and culture on which tourism is based, as well as proper use of resources; to promote community development such as improving appeal, value, and the economy; and to conduct education and research for students to acquire comprehensive skills and expertise.
